

Android 5.1 SIM 卡不识别问题修改指导

版权所有 © 华为技术有限公司 2015。保留一切权利。

未经华为技术有限公司书面同意,任何单位和个人不得擅自摘抄、复制本手册内容的部分或全部,并不得以任 何形式传播。

本手册描述的产品中,可能包含华为技术有限公司及其可能存在的许可人享有版权的软件。除非获得相关权利 人的许可,否则,任何人不能以任何形式对前述软件进行复制、分发、修改、摘录、反编译、反汇编、解密、 反向工程、出租、转让、分许可等侵犯软件版权的行为,但是适用法禁止此类限制的除外。

商标声明

在本手册以及本手册描述的产品中,出现的其他商标、产品名称、服务名称以及公司名称,由其各自的所有人 拥有。

注意

本手册描述的产品及其附件的某些特性和功能,取决于当地网络的设计和性能,以及您安装的软件。某些特性 和功能可能由于当地网络运营商或网络服务供应商不支持,或者由于当地网络的设置,或者您安装的软件不支 持而无法实现。因此,本手册中的描述可能与您购买的产品或其附件并非完全一一对应。

华为技术有限公司保留随时修改本手册中任何信息的权利,无需提前通知且不承担任何责任。

责任限制

本手册中的内容均"按照现状"提供,除非适用法要求,华为技术有限公司对本手册中的所有内容不提供任何 明示或暗示的保证,包括但不限于适销性或者适用于某一特定目的的保证。

在适用法律允许的范围内,华为技术有限公司在任何情况下,都不对因使用本手册相关内容及本手册描述的产 品而产生的任何特殊的、附带的、间接的、继发性的损害进行赔偿,也不对任何利润、数据、商誉或预期节约 的损失进行赔偿。

在相关法律允许的范围内,在任何情况下,华为技术有限公司对您因为使用本手册描述的产品而遭受的损失的 最大责任(除在涉及人身伤害的情况中根据适用的法律规定的损害赔偿外)以您购买本产品所支付的价款为限。

进出口管制

若需将本手册描述的产品(包括但不限于产品中的软件及技术数据等)出口、再出口或者进口,您应遵守适用 的进出口管制法律法规。

隐私保护

(DVP05T03 V2.41/ IPD-CMM V3.0)

(DVP05T03 V2.41/ IPD-CMM V3.0)

Android 5.1原生系统存在SIM卡不识别问题,这是由于上层读取ICCID (通过SIM IO接

口)返回值解析错误导致;需要修改framework层逻辑。

一、修改IccFileHandler.java文件

(frameworks\opt\telephony\src\java\com\android\internal\telephony\uicc\IccFileHandler.jav a),如下:

```
修改public void handleMessage(Message msg)函数(红色部分):
     修改EVENT_GET_EF_LINEAR_RECORD_SIZE_DONE事件:
           case EVENT_GET_EF_LINEAR_RECORD_SIZE_DONE:
                ar = (AsyncResult)msg.obj;
                lc = (LoadLinearFixedContext) ar.userObj;
                result = (IccIoResult) ar.result;
                response = lc.mOnLoaded;
                if (processException(response, (AsyncResult) msg.obj)) {
                     break;
                }
                data = result.payload;
                if (UiccTlvData.isUiccTlvData(data)) {
                    UiccTlvData tlvData = UiccTlvData.parse(data);
                    if (tlvData.isIncomplete()) {
                         throw new IccFileTypeMismatch();
                     }
                    recordSize = new int[3];
                     recordSize[0] = tlvData.mRecordSize;
                     recordSize[1] = tlvData.mFileSize;
                     recordSize[2] = tlvData.mNumRecords;
                } else if (TYPE_EF == data[RESPONSE_DATA_FILE_TYPE] &&
                    EF\_TYPE\_LINEAR\_FIXED == data[RESPONSE\_DATA\_STRUCTURE]) \ \{
                    recordSize = new int[3];
                     recordSize[0] = data[RESPONSE_DATA_RECORD_LENGTH] & 0xFF;
                     recordSize[1] = ((data[RESPONSE_DATA_FILE_SIZE_1] & 0xff) << 8)
                             + (data[RESPONSE_DATA_FILE_SIZE_2] & 0xff);
                    recordSize[2] = recordSize[1] / recordSize[0];
```

```
} else {
              throw new IccFileTypeMismatch();
          /*recordSize = new int[3];
          recordSize[0] = data[RESPONSE_DATA_RECORD_LENGTH] & 0xFF;
          recordSize[1] = ((data[RESPONSE_DATA_FILE_SIZE_1] & 0xff) << 8)
                  + (data[RESPONSE_DATA_FILE_SIZE_2] & 0xff);
          recordSize[2] = recordSize[1] / recordSize[0];*/
          sendResult(response, recordSize, null);
     break;
修改EVENT_GET_RECORD_SIZE_DONE事件:
       case EVENT_GET_RECORD_SIZE_DONE:
             ar = (AsyncResult)msg.obj;
             lc = (LoadLinearFixedContext) ar.userObj;
             result = (IccIoResult) ar.result;
             response = lc.mOnLoaded;
             if (processException(response, (AsyncResult) msg.obj)) {
                 break;
             }
             data = result.payload;
             if (UiccTlvData.isUiccTlvData(data)) {
                 UiccTlvData tlvData = UiccTlvData.parse(data);
                 if (tlvData.isIncomplete()) {
                     throw new IccFileTypeMismatch();
                 }
                 lc.mRecordSize = tlvData.mRecordSize:
                 lc.mCountRecords = tlvData.mNumRecords;
                 size = tlvData.mFileSize;
             } else if (TYPE_EF == data[RESPONSE_DATA_FILE_TYPE]) {
                 if (EF_TYPE_LINEAR_FIXED != data[RESPONSE_DATA_STRUCTURE]) {
                     throw new IccFileTypeMismatch();
                 }
```

```
size = ((data[RESPONSE_DATA_FILE_SIZE_1] & 0xff) << 8)
                          + (data[RESPONSE_DATA_FILE_SIZE_2] & 0xff);
                  lc.mCountRecords = size / lc.mRecordSize;
             } else {
                  throw new IccFileTypeMismatch();
             /*if (EF_TYPE_LINEAR_FIXED != data[RESPONSE_DATA_STRUCTURE]) {
                  throw new IccFileTypeMismatch();
             lc.mRecordSize = data[RESPONSE_DATA_RECORD_LENGTH] & 0xFF;
             size = ((data[RESPONSE_DATA_FILE_SIZE_1] & 0xff) << 8)
                     + (data[RESPONSE_DATA_FILE_SIZE_2] & 0xff);
             lc.mCountRecords = size / lc.mRecordSize;*/
              if (lc.mLoadAll) {
                   lc.results = new ArrayList<byte[]>(lc.mCountRecords);
              }
              mCi.iccIOForApp(COMMAND_READ_RECORD, lc.mEfid, getEFPath(lc.mEfid),
                       lc.mRecordNum,
                       READ_RECORD_MODE_ABSOLUTE,
                       lc.mRecordSize, null, null, mAid,
                       obtainMessage(EVENT_READ_RECORD_DONE, lc));
              break;
修改EVENT_GET_BINARY_SIZE_DONE事件:
        case EVENT_GET_BINARY_SIZE_DONE:
             ar = (AsyncResult)msg.obj;
             response = (Message) ar.userObj;
             result = (IccIoResult) ar.result;
             if (processException(response, (AsyncResult) msg.obj)) {
                  break;
             }
             data = result.payload;
```

lc.mRecordSize = data[RESPONSE_DATA_RECORD_LENGTH] & 0xFF;

```
if (UiccTlvData.isUiccTlvData(data)) {
                           UiccTlvData tlvData = UiccTlvData.parse(data);
                           if (tlvData.mFileSize < 0) {
                               throw new IccFileTypeMismatch();
                           size = tlvData.mFileSize;
                       } else if (TYPE_EF == data[RESPONSE_DATA_FILE_TYPE]) {
                           if (EF_TYPE_TRANSPARENT != data[RESPONSE_DATA_STRUCTURE]) {
                               throw new IccFileTypeMismatch();
                           }
                           size = ((data[RESPONSE_DATA_FILE_SIZE_1] & 0xff) << 8)
                                    + (data[RESPONSE\_DATA\_FILE\_SIZE\_2] \ \& \ 0xff);
                           throw new IccFileTypeMismatch();
                       /*if (EF_TYPE_TRANSPARENT != data[RESPONSE_DATA_STRUCTURE]) {
                           throw new IccFileTypeMismatch();
                       }
                       size = ((data[RESPONSE_DATA_FILE_SIZE_1] & 0xff) << 8)
                              + (data[RESPONSE_DATA_FILE_SIZE_2] & 0xff);*/
                       mCi.iccIOForApp(COMMAND_READ_BINARY, fileid, getEFPath(fileid),
                                        0, 0, size, null, null, mAid,
                                        obtain Message (EVENT\_READ\_BINARY\_DONE,
                                                      fileid, 0, response));
                       break;
二、增加UiccTlvData.java协议解析文件
    (frameworks\opt\telephony\src\java\com\android\internal\telephony\uicc\UiccTlvData.java)
       UiccTlvData.java
                          如下(红色部分代码):
```

fileid = msg.arg1;

```
package com.android.internal.telephony.uicc;
```

```
* UICC TLV Data Parser according to ETSI TS 102 221 spec.
 */
public class UiccTlvData {
    private static final int TLV_FORMAT_ID = 0x62;
    private static final int TAG_FILE_DESCRIPTOR = 0x82;
    private static final int TAG_FILE_IDENTIFIER = 0x83;
    private static final int TAG_PROPRIETARY_INFO = 0xA5;
    private static final int TAG_LIFECYCLE_STATUS = 0x8A;
    private static final int TAG_SECURITY_ATTR_1 = 0x8B;
    private static final int TAG_SECURITY_ATTR_2 = 0x8C;
    private static final int TAG_SECURITY_ATTR_3 = 0xAB;
    private static final int TAG_FILE_SIZE = 0x80;
    private static final int TAG_TOTAL_FILE_SIZE = 0x81;
    private static final int TAG_SHORT_FILE_IDENTIFIER = 0x88;
    private static final int TYPE_5 = 5;
    private static final int TYPE_2 = 2;
    int mRecordSize;
    int mFileSize;
    int mNumRecords;
    boolean mIsDataEnough;
    private int mFileType = -1;
    private UiccTlvData() {
         mNumRecords = -1;
         mFileSize = -1;
         mRecordSize = -1;
    }
    public boolean isIncomplete() {
         return mNumRecords == -1 || mFileSize == -1 || mRecordSize == -1 || mFileType == -1;
    public static boolean isUiccTlvData(byte[] data) {
         if(data != null && data.length > 0 && TLV_FORMAT_ID == (data[0] & 0xFF)) {
             return true;
```

```
return false;
public static UiccTlvData parse(byte[] data) throws IccFileTypeMismatch{
    UiccTlvData parsedData = new UiccTlvData();
    if (data == null || data.length == 0 || TLV_FORMAT_ID != (data[0] & 0xFF)) {
        throw new IccFileTypeMismatch();
    }
    try {
        int currentLocation = 2; //Ignore FCP size
